

To reduce the risk of COVID-19 at EGRIP:

EGRIP COVID-19 Antigen rapid testing procedure:

1. All EGRIP participants staying at KISS will be tested soon upon arrival. (This does not apply to those who have been quarantining.)
2. If any participant shows symptoms, they will be tested asap.
3. All EGRIP participants to board a plane to EGRIP will be tested the morning before departure.

In case of positive results:

- a. A re-test will be made to reduce risk of a false positive.
- b. Any participant still positive will be isolated. A possible KISS roommate will be moved to another room and be isolated from the rest of the EGRIP group. Roommates will be tested daily, and can go to EGRIP as long as tests remain negative.

The FOMs in Kangerlussuaq have received training to perform antigen tests. EGRIP provides the antigen test (quick test) kits.

The FOMs
